Personal Projects

Music Battle Website (in development): Developing an educational website that will allow users to use a toy DAW to write songs in a certain time frame that will be voted on in real time by other players in a lobby. The song with the most votes wins. Planning to add song sharing, ranking, exporting, and tutorials.

Tools: React, Tailwind, Tone.js. Planning to implement Node.js, Express.js, Socket.io, and PostgreSQL.

Keystroke Tracker: Developed a desktop app that tracked user keystrokes and visualized the data in a dashboard based on frequency and time. This application included utilizing multithreading and the ProcessBuilder in Java.

Tools: Java, Python, Matplotlib, Java kwhat library, Java Swing

Class Projects

Android App "Colloney": Developed an app in a team of four where Students can save for Tuition while role playing as an alien colonizer. App included user profiles, college expense estimator, watching stocks, buying and selling stocks, different bank accounts, a news feed, a budgeter, a social platform, an AI financial advisor, and an admin page for moderating users and viewing server statistics. I worked on frontend for this.

Tools: Java, Android Studio, XML, Git, GitLab, Pipelining

RISC-V Virtual Processor: Developed with a partner three different types of virtual RISC-V processors, including single cycle, software scheduled, and hardware scheduled processors. Implemented enough commands in each processor to run merge sort, Fibonacci sequence, and a matrix multiplication algorithm called grendel.

Tools: VHDL, RISC-V

Music Artists Website: Developed with a partner a full stack website that dynamically created music artist information pages, with songs that could be liked. Also, included a mock ecommerce store for merch.

Tools: React, Node.js, Express.js, MongoDB, and some APIs

Autonomous Roomba "Nanobot": Programmed a Roomba to navigate a field of pillars and eliminate the smallest ones. Meant to simulate a nanobot fighting a virus in the bloodstream. This was a group project, but I contributed to gathering and manipulating Roomba and scanner sensor data and developing the navigation system.

Tools: C

Skills

Languages: Java, JavaScript, C, Python, SQL, Bash, VHDL

Web: React, Tailwind, Node.js, Express.js, MySQL, MongoDB, HTML, CSS

Other: Git/Github, Postman, Matplotlib, Pygame, Neovim, TMux, Linux, XML

Education

School: Currently attending Iowa State University for software engineering. Graduating May 2027.

Current GPA: **3.82**

Involvement: DIS student leader, run club, CSE club, Competitive Programming club.

Work History

Hickory Park Kitchen Worker: My current job that I started in early September 2025, 16 hours per week.

Lowe's: Worked here the summers of 2024 and 2025, 30 hours per week.
